

Press Release

REGIONAL UTILITY IN TEXAS DEPLOYS RADWIN WIRELESS SOLUTIONS FOR SCADA COMMUNICATIONS

RADWIN's systems used for remote water monitoring & control and managing critical assets

Tel Aviv, Israel, October 10, 2012 – RADWIN (www.radwin.com), the global provider of Backhaul and Broadband Wireless solutions, today announced that a large Regional Utility Authority in Texas deployed RADWIN 5000 point-to-multipoint and RADWIN 2000 point-to-point solutions for SCADA (Supervisory Control and Data Acquisition) water control. The RADWIN-based network connects well sites, treatment plants and pump stations and provides up to 90 Mbps throughput to remote sites. JTS, a full-service company based in Texas, was in charge of project design and implementation.

RADWIN's point-to-multipoint and point-to-point solutions support long range connectivity and incorporate advanced technologies such as OFDM and MIMO. The wireless radios operate in extreme temperatures, over-water and non line-of-sight (NLOS) conditions and are very simple to install and maintain.

Justin Montelongo, JTS Project Manager: “RADWIN’s solutions were the ideal fit for this project, delivering the high capacity required at the right price point. RADWIN’s radios also offer a unique Multiband feature which supports multiple bands in the same radio, enabling the regional utility to use the 5.8 GHz band until 4.9 GHz licensing is approved. The regional utility is happy with the performance of RADWIN’s radios and intends on using them in the future for video monitoring of its critical sites.”

Mike Cook, General Manager, RADWIN North America: “This deployment highlights the need of utility companies for high-capacity wireless solutions that will allow them to streamline remote water monitoring and control and manage critical assets. We are proud to have been chosen as a critical building block of this SCADA communications network and look forward to supporting this regional utility as they continue to expand their network.”

RADWIN wireless systems deployed by regional water utility for SCADA communications

About JTS

JTS is a full service company involved in building network infrastructure to support your voice, video, and data needs. We specialize in unlicensed and licensed microwave radio installation services. Our turn-key wireless designs offer an economical alternative to traditional leased lines or fiber trenching. If you need connectivity to establish a private data network, or network redundancy, we can provide you with a solution within days as opposed to weeks or months, at a fraction of the cost with a significant ROI. With over 23 years of experience in electronic systems integration, we can provide services to help you quickly and economically reach your networking and systems goals. We pride ourselves on our flexibility and rapid deployment.
