DasNet
CORPORATION

DasNet Corporation is a NYC MWBE systems engineering firm providing intricate Data, Voice, Video and Cybersecurity products & solutions to government.

DasNet Corporation (DasNet) was founded in 1997 in New York as a Veteran Minority Owned Small Business specializing in providing systems engineering and telecommunication solutions and products with specific emphasis on RF Engineering for Satellite and Microwave systems.

Systems Design, Engineering, Integration, and Operations are at DasNet's core. They are what constitute its business model; it is frankly what it does each and every day and has done for the past two (2) decades. During this period, DasNet has developed a global footprint through its headquarters in New York and various CONUS offices, as well as, international offices in Southwest Asia - Saudi Arabia, Afghanistan, and Dubai; and Far East Asia - Japan and Korea.

DasNet delivers disciplined and structured engineering solutions in collaboration with its Military and Government clients. Through the use of commercial best practices, in accordance with governmental standards, DasNet's engineered solutions are inclusive of analysis, assessment, development, testing, evaluation, validation and support of the delivered solutions - whether the design is a new ground-up project or the redesign of an existing infrastructure, we deliver long-term solutions and complete integrations required by clients whom are predominately represented by the US Government.

Dedicated Resources and Expertise

OUR QUALIFICATIONS

STRENGTH IN EXPERIENCED EMPLOYEES

- Industry certified installers, engineers, program managers with extensive engineering experience

- Highly technical staff of engineers, technicians and managers

- Extensive supply chain distribution channel

- DCAA, DCMA Audited Financial System & Procurement Program

- Successful graduate of SBA 8a program -26 Federal Plaza, NYC.

- International operations with headquarters in New York State on Long Island.

Certified Professionals

Experienced engineers, installers, programmers, analysts and program managers

Phase I: Program Development

Design & Engineering

- We consider the Design & Engineering phase of each project as the most important phase of our Project Engineering Model. During this stage, the vital details for developing a successful project are established.

Program Management

- Each project should enjoy the opportunity of being assigned a subject matter expert or directional leader. We refer to this individual, a Program/Project Manager, as the key interface between DasNet and the customer on all project related matters.

Phase II: Project Execution

System Installation

- A professional installation is the result of strategic planning, precise procurement, qualified personnel, quality equipment, products, and materials. And importantly, a commitment to excellence on the behalf of the installers.

Network Integration

- The interoperability and merging of disparate or analogous platforms into a functioning hybrid infrastructure with negligible disruptions to live systems or the end client is what we consider Network Integration.

Phase III: System Certification
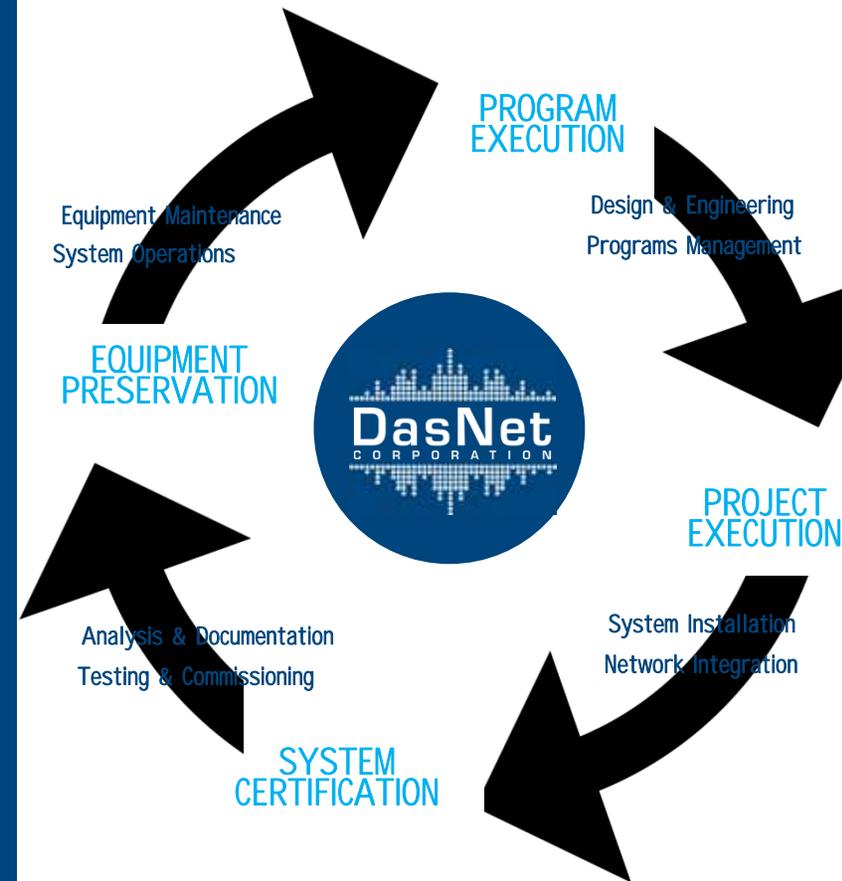

Testing & Commissioning

- A network system, whether independent or a subset of a larger infrastructure, must meet established specs for given modes of operations in order to reliably sustain supported high bandwidth data, time sensitive video and digital voice applications. In a sense, the part must be conditioned to interact with or as the whole.

Program Management

- To ensure the customer, or its contractor, has the data required to answer these questions and others, the supporting information should be readily available in an organized printed fashion, as well as electronic format. For proper operation and maintenance to occur, there are specific details that must be known.

Phase IV: Equipment Preservation

- How well a facility, network, or its supporting equipment operates is interdependent on how well it is maintained. Operation & Maintenance (O&M) is a critical tool in maintaining mission critical systems and should be entrusted to those with the applicable knowledge, experience, and commitment.
