#### **POTENTIAL HAZARDS**

- Toxicity: polyethylene is chemically unreactive and is generally regarded as being biologically inert. According to the information available to us, the product is not harmful to health providing it is correctly handled and processed according to the given recommendations.
- Inhalation
  - Fume evolution: there is no release of any noxious fumes from polyethylene at ambient temperature.
  - Dust generated in processing polyethylene yarns and tapes presents no special hazard but atmospheric dust levels should be kept below the TLV of 10gm/m<sup>3</sup> for nuisance dusts.

---

#### **INGESTION**

Although polyethylene is inert and can be regarded as harmless, certain additives could be harmful and ingestion is not recommended.

### **PHYSICAL CONTACT**

Polyethylene yarns and tapes are not considered to be a skin irritant, but where lubrication has been applied as a processing aid, this may cause irritation, particularly to the eyes. Eyes affected by lubricant should be washed with cold water for fifteen minutes with eyelids held open.

Burns caused by molten material require hospital treatment.

---

### **FLAMMABILITY**

Polyethylene is flammable but difficult to ignite. Store in a safe area. Water, foam CO<sub>2</sub> and dry extinguishing media are suitable. The following can be given off in a fire: CO, CO<sub>2</sub>.

The product contains combustible polymers therefore relevant fire protection measures apply.

---

### **HANDLING PROCEDURES**

Practice normal industrial hygiene. Sweep up to prevent slipping. Gaseous products of degradation can be given off if the product is greatly overheated.

---

### **WASTE DISPOSAL**

To be carried out in accordance with Local Authority Regulations. UK Environmental Protection (Duty Of Care) regulations (EP) and amendments should be noted (United Kingdom).

---

## **Bonar Yarns Statement on Lead in Synthetic Grass Yarns**

Bonar Yarns endorses the recent work done by the Synthetic Turf Council (STC) regarding the investigation into the use of lead in synthetic turf, and welcomes the US Consumer Products Safety Commission (CPSC) statement confirming that synthetic turf is not harmful for all users from athletes to young children.

Bonar Yarns prides itself on its responsibility to the environment and to manufacturing in a responsible manner. Bonar Yarns were amongst the first yarn producers to offer environmentally friendly raw materials as early as 1999. Currently, all grass yarns produced conform to the DIN18035-7 standard for the leaching of lead and other heavy metals.

Bonar Yarns will remain steadfast in its dedication to environmentally friendly production, from raw materials to finished product, and supports industry-wide initiatives to make the grass business even 'greener'.

## **HEAVY METALS STATEMENT**

To determine the impact of our yarns in the environment, we recently carried out a test-program with a well-established German institute. The test program determined the content of heavy metals in our yarns, and to what extent heavy metals could end up in the environment during (acid) showers, searing heat and sunlight.

The table below lists the "concentrations" of heavy metals in our grass yarns, as tested at the institute for ecological building products, headed by Dr. Grunder.

Heavy metal	Unit	BONASOFT / BONAFIL	BONAGRASS MKII	Norm
Lead	[mg/kg]	6	< 3	85
Cadmium	[mg/kg]	< 0.3	< 0.3	0.8
Chrome total	[mg/kg]	7.2	5.7	100
Mercury	[mg/kg]	< 0.3	< 0.3	0.3
Zinc	[mg/kg]	15	11	140
Tin	[mg/kg]	< 10	< 10	---
Copper	[mg/kg]	119	109	---

In addition to the "concentrations" of heavy metals, it is important to determine to what extent heavy metals present in our yarn leach out during (acid) showers, searing heat and sunlight. The results are listed below against the new DIN 18035-7 norm.

Heavy metal	Unit	BONASOFT / BONAFIL	BONAGRASS MKII	DIN Norm
Lead	[mg/l]	< 0.005	< 0.005	< 0.04
Cadmium	[mg/l]	< 0.0005	< 0.0005	< 0.005
Chrome total	[mg/l]	< 0.005	< 0.005	< 0.05
Mercury	[mg/l]	< 0.0002	< 0.0002	< 0.001
Zinc	[mg/l]	0.19	0.25	< 3.0
Tin	[mg/l]	< 0.05	< 0.05	< 0.05
Copper	[mg/l]	0.01	0.02	---

**Conclusion** – Bonar grass yarns may be used anywhere without restriction, even in sensitive areas. Bonar grass yarns may also be recycled, dumped or burnt as normal waste.

Elemental Analytical Procedure (except Mercury) - EPA 3050B acid digestion with EPA 6010B ICP analysis.

For all elements except Mercury - small pieces of the synthetic grass blades were dissolved in concentrated nitric acid using a hot block or hot plate digestion. The digested sample solutions were then analyzed for element content using inductively coupled plasma atomic emission spectroscopy. This analysis tests for the total amount of the element that can be extracted from the material.

Mercury is analyzed by acid preparation and reaction to generate a Cold Vapor Atomic Absorption Analysis via EPA 7471A

REPORT TITLE	WOM Testing
REPORT AUTHOR	Jacki Stephen
DATE	11/7/10

**DESCRIPTION SUMMARY**

All grass or UV stabilised samples are tested in an Atlas Ci4000 Weather-O-Meter.

The machine above is a xenon arc weather-o-meter (WOM); this differs from the standard QUV as it tests the samples over the full light wavelength, rather than the UVA or UVB wavelength. This gives us a more accurate picture of how the yarn would behave under real life conditions.

All samples are tested according to the international standard ISO 4892-2:2006(E), Plastics-Methods of exposure to laboratory light sources- Part 2: Xenon-arc lamps.

This test method specifies the temperature at which the samples are subjected, the length of rain cycle and the humidity cycle.

Xenon arc lamp

Start of the rain & humidity cycles

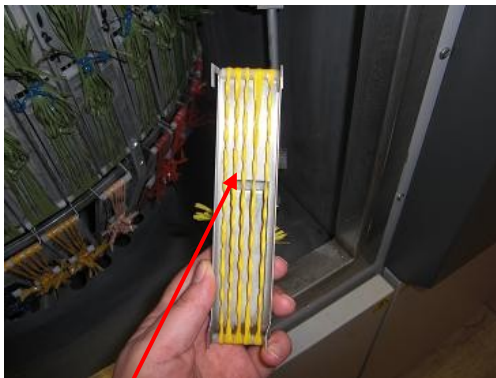

Dry cycles

The samples are tested before weathering for strength and extension at break. This is the reference point to which subsequent samples are compared against.

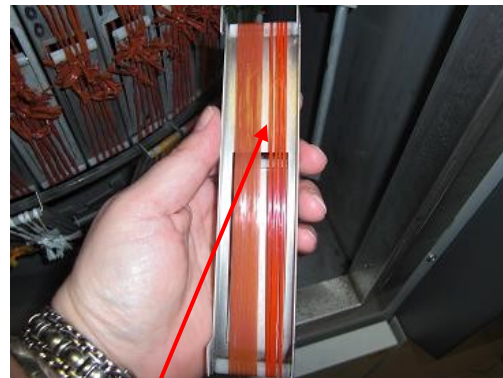

The samples are put on holders and slotted onto the globe shaped rack.

The samples are tested for retained strength and for colour fastness.

Sample holder for retained strength

Sample holder for colour fastness

The retained strength samples are tested according to British Standard BS 4611:1989 Methods of tests for Polyolefin tape yarns.

The colour fastness samples are tested according to International Standard ISO 105-A02 Textiles- Tests for colour fastness- Part A02: Grey scale for assessing change in colour.

Not all grass yarns are tested in the WOM, the reason for this is because we have limited space and a full WOM test takes a very long time.

What we try and do is test each colour, and each polymer at the lowest thickness and the most common thickness.

The dtex and the fibrillation pattern do not affect the outcome of the WOM test; it is the thickness that is critical. If a yarn passes the test at the lowest thickness it will certainly pass at a higher thickness.

This is because the pigment, UV stabiliser and polymer concentrations are the most critical parameters. The thinner the film the more light can pass through and attack the colour and the polymer.

All colours and polymers degrade over time, some faster than others, no colour or polymer is "bullet proof", what we try to do with our WOM is determine how our fibres will perform under the harshest conditions, so we can give our client an accurate UV warranty.

All colours are tested to 6000 hours in the WOM, they must be no lower than 3 on the grey scale in order to pass. A 1 being the worst and a 5 being no change in colour. See explanation of grading system on next sheet.

**EN ISO 105-A03 / IUF 132 / VESLIC C 1211**

This Grey Scale is for assessing the **degree of change in shade** caused to a dyed Textile fabric / yarn in color fastness tests. For example, the change of shade of wool and cotton fabrics in the wash fastness, perspiration fastness, etc.

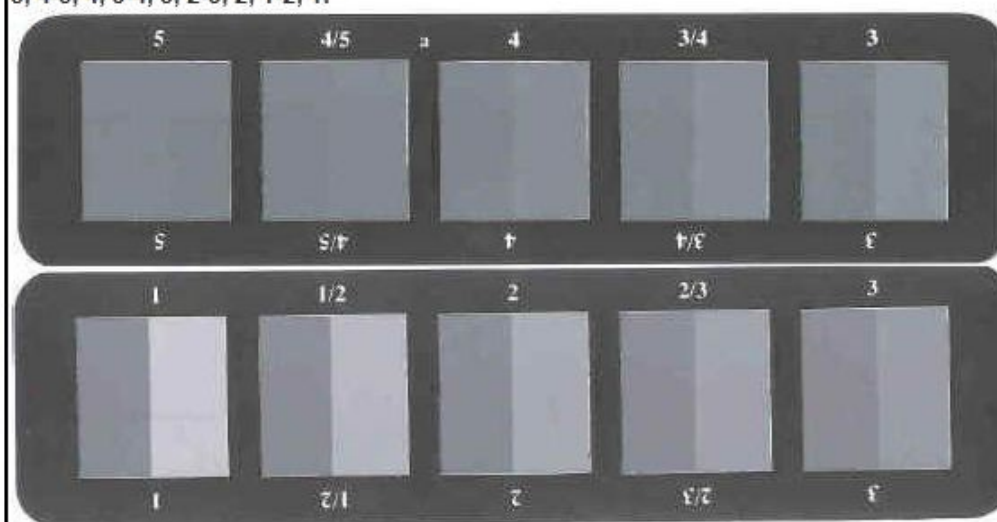

The scale consists of nine pairs of gray color chips each representing a visual difference and contrast.

The fastness rating goes **step-wise** from:

Note 5 = no visual change (best rating) to Note 1 = a large visual change (worst rating).

The gray scale has the 9 possible values:

5, 4-5, 4, 3-4, 3, 2-3, 2, 1-2, 1.

For retained strength the sample is tested for tensile properties before weathering and then 6 sample holders are put in the machine and one holder is removed at several intervals and tested for tensile properties, this result is compared to the un-aged sample until the sample reaches 50% retained strength, then the test is complete.

The retained strength test differs for each of the colours, some more exotic colours as you may imagine have shorter life spans than say the standard sports green.

In general we like to see the exotics get to at least 6000 hours, and the standards get to 10 000 hours, so we can be comfortable giving our warranty to the yarn.

**COMPARISON WOM/OUTDOOR EXPOSURE**

The average global radiation-energy in South Florida is almost 2 times as high as in the UK. In addition the sunlight in South Florida contains approx. 6.1% UV radiation and the sunlight in the UK approx. 5% this means:

- 1 kLy in South Florida has the same ageing effect as 1.22 kLy in the UK
- The acceleration factor of the WOM against the 150kLy area (e.g. South Florida) = 5 times.
- The acceleration factor of the WOM against the 80 kLy area (e.g. UK) = 9.4 times

Time (hrs.) in WOM ISO 4892-2	kLy South-Florida	kLy UK	Outdoor exposure South-Florida	Outdoor exposure UK
500	43	52.5	15 weeks	34 weeks
1000	86	105	30 weeks	1.3 years
4000	344	420	2.3 years	5.25 years
6000	516	630	3.5 years	8 years
8000	688	840	4.6 years	10.5 years
10 000	860	1050	5.7 years	13 years
12 000	1032	1260	6.9 years	15.75 years
15 000	1290	1575	8.6 years	19.7 years

In the WOM the "sun" is shining always straight and perpendicular onto the exposed sample and the maintained test-chamber temperature, is always as high like the maximal temperature in South Florida.

In reality (pitch situation) the angle of the sun is only for part of the day directly on top of the pitch surface, and the temperature varies throughout the day, so depending on the construction and yarn types the yarn is not fully exposed to the sun at all times.

### NUMBERS AND CALCULATIONS

- 1 Langley = 1 cal/cm<sup>2</sup> = 41.84 kJ/m<sup>2</sup> (4.184 J/cm<sup>2</sup>)
- 1 kLangley = 1 kcal/cm<sup>2</sup> = 41.84 MJ/m<sup>2</sup>
- 1 kLangley/year = 1.33 W/m<sup>2</sup>
- W/m<sup>2</sup> x sec = Joule
- WOM with 0.50 W/m<sup>2</sup> @ 340nm = ca. 1000 W/m<sup>2</sup> global radiation (WOM with 0.34 W/m<sup>2</sup> @ 340nm = ca. 680 W/m<sup>2</sup> global radiation)

Calculations WOM:

1 hour WOM with an irradiance of 0.50 W/m<sup>2</sup> @ 340 nm is:

- 1000 W/m<sup>2</sup> x 3600 seconds = 3 600 000 joule or 3.6 MJ/hr
- 3.6 MJ/hr:41.84 kJ/m<sup>2</sup> = 0.086 kLangley

1 year WOM with an irradiance of 0.5 W/m<sup>2</sup> @ 340 nm is:

- 3.6 MJ/hr x 8760 hrs. = 34.536 MJ/year
- 34.536 MJ/year = 753.7 kLangley

Calculations outdoor:

The radiation energy (dosage) per year in an area of 150 kLy is:

- 150 kLy x 41.84 MJ/m<sup>2</sup> = 6276 MJ/year

Relation or correlation between WOM and outdoor exposure:

- The radiation in the area is 150 kLy or 6276 MJ/year
- The radiation in the WOM is 3.6 MJ/hour
- To match 1 year (=8760 hours) outdoor exposure we need 6276:3.6
  - = 1743 hours or 10.3 weeks in WOM

**\*Continuous Contract:** Any existing written agreement (including any renewals that are exercised) between a prime contractor and a HUB vendor, where the HUB vendor provides the prime contractor with goods or service under the same contract for a specified period of time. The frequency the HUB vendor is utilized or paid during the term of the contract is not relevant to whether the contract is considered continuous. Two or more contracts that run concurrently or overlap one another for different periods of time are considered by CPA to be individual contracts rather than renewals or extensions to the original contract. In such situations the prime contractor and HUB vendor are entering (have entered) into "new" contracts.

# HUB Subcontracting Plan (HSP)

In accordance with Texas Gov't Code §2161.252, the contracting agency has determined that subcontracting opportunities are probable under this contract. Therefore, all respondents, including State of Texas certified Historically Underutilized Businesses (HUBs) must complete and submit this State of Texas HUB Subcontracting Plan (HSP) with their response to the bid requisition (solicitation).

**NOTE: Responses that do not include a completed HSP shall be rejected pursuant to Texas Gov't Code §2161.252(b).**

The HUB Program promotes equal business opportunities for economically disadvantaged persons to contract with the State of Texas in accordance with the goals specified in the 2009 State of Texas Disparity Study. The statewide HUB goals defined in 34 Texas Administrative Code (TAC) §20.13 are:

- **11.2 percent for heavy construction other than building contracts,**
- **21.1 percent for all building construction, including general contractors and operative builders' contracts,**
- **32.9 percent for all special trade construction contracts,**
- **23.7 percent for professional services contracts,**
- **26.0 percent for all other services contracts, and**
- **21.1 percent for commodities contracts.**

## - - Agency Special Instructions/Additional Requirements - -

In accordance with 34 TAC §20.14(d)(1)(D)(iii), a respondent (prime contractor) may demonstrate good faith effort to utilize Texas certified HUBs for its subcontracting opportunities if the total value of the respondent's subcontracts with Texas certified HUBs meets or exceeds the statewide HUB goal or the agency specific HUB goal, whichever is higher. When a respondent uses this method to demonstrate good faith effort, the respondent must identify the HUBs with which it will subcontract. If using existing contracts with Texas certified HUBs to satisfy this requirement, only contracts that have been in place for five years or less shall qualify for meeting the HUB goal. This limitation is designed to encourage vendor rotation as recommended by the 2009 Texas Disparity Study.

The notice must specify at a minimum the contracting agency's name and its point of contact for the contract, the contract award number, the subcontracting opportunity they (the subcontractor) will perform, the approximate dollar value of the subcontracting opportunity and the expected percentage of the total contract that the subcontracting opportunity represents. - The respondent must submit monthly compliance reports (Prime Contractor Progress Assessment Report – PAR) to the contracting agency, verifying its compliance with the HSP, including the use of and expenditures made to its subcontractors (HUBs and Non-HUBs). (The PAR is available at <http://www.window.state.tx.us/procurement/prog/hub/hub-forms/progressassessmentrpt.xls>).
- The respondent must seek approval from the contracting agency prior to making any modifications to its HSP, including the hiring of additional or different subcontractors and the termination of a subcontractor the respondent identified in its HSP.
