Overview

Rackspace US, Inc. is an innovative, leading multicloud services pioneer with more than a decade of proven expertise in public cloud service platforms as well as 23+ years in professional services, application services, data services, and network & security. This includes DevOps, CI/CD, landing zones, cloud strategy, migration roadmap, SAP, Oracle, PeopleSoft, and M365 services, data analytics, and Artificial Intelligence / Machine Learning (AI/ML). Today, Rackspace is a leading provider of expertise and managed services across all major public and private cloud technologies, including Amazon, Google, Microsoft, OpenStack, and VMware.

Multicloud Simplified and Secure
The Rackspace Technology Government Solutions portfolio offers unparalleled multicloud, security, and compliance expertise; empowering Public Sector organizations and their partners to confidently design, build, manage, and optimize the cloud. As a result, agencies, educational institutions, healthcare organizations, and non-profits can accelerate innovation and agility – and meet mission and business requirements faster. Rackspace Technology Government Solutions enables customers to focus on being mission experts, rather than cloud experts.

Onica by Rackspace Technology is a business group that is 100% dedicated to serving U.S and Canada. Recognized as the U.S and Canadian Migration Partner of the Year for 2021, this group of 775+ dedicated AWS sales, and solution architecture and engineering teams is solely focused on helping organizations migrate and optimize cloud environments, transform cloud applications, modernize data architectures, and secure cloud environments.

Uniquely multicloud – Agencies are leaving the data center and they are either going from on premise to public cloud, from on premise to private cloud, or from outsourced cloud to outsourced cloud. They are not returning to the data center. No other managed services provider can accommodate both public and private cloud journeys. Our process also meets agencies where they are on a continuous journey of assessing, migrating, modernizing, and optimizing. Our services are categorized as multicloud, data, applications, and security.

In the early 2000s, we invented Managed Hosting and in 2011 we co-founded the OpenStack cloud with NASA. Today we offer Software Defined Data Center solutions in 30+ Rackspace data centers and follow our customer demand to support hyperscale clouds such as AWS, Microsoft Azure, Google Cloud Platform, and Oracle Cloud Infrastructure. We are uniquely positioned to assess, build, migrate, manage, and optimize on all platforms with Rackspace Fabric Automation and RackConnect Global, our backbone network for hybrid solutions.

Data
Rackspace has expertise in Data warehouse, Data analytics, Business Intelligence, AI/ML solutions, and Data Modernization solutions, such as moving from Oracle to Microsoft SQL or PostgreSQL for use in Azure and Amazon Aurora. As agencies move data for analysis, they are often unprepared for the cost public clouds charge for data transit from cloud to cloud, or cloud to on premise. Rackspace created Data Freedom as a low cost solution for moving data between clouds to use it where it makes the most sense and only when it needs to move.

Applications
Technical, Functional, and Development services for SAP and Oracle ERP, Microsoft 365, and professional services for transforming existing apps with application modernization or creating new applications with cloud native development. Develop faster with best fit cloud services, cost optimization, and ready to be sold as SaaS.

Security
FedRAMP solutions for VMware and AWS, AWS ATO, CMMC, and Path to StateRAMP. Rackspace data centers are PCI-DSS and HIPAA capable and our engineers apply security best practices to every private or public cloud design. Point solutions are available for Zero Trust, Disaster Recovery, Data Protection, back-ups, and support for cloud native security services
