### **Overview**

*Install Or Replacements of HVAC Related Equipment*

*Air-Cooled Chillers: Use air as the medium to dissipate heat. These are self-contained units that have fans to blow air across coils containing the refrigerant.*

*Water-Cooled Chillers: Transfer heat to a separate water source, often through a cooling tower or another water loop.*  
*Furnace: Heats air for distribution throughout the building.*

*Air Conditioner (AC) or Heat Pump: Cools or heats air as needed.*

*Boiler: Heats water or produces steam for heating systems.*

*Thermostat: Controls and regulates the temperature in a space.*

*Ductwork: Channels that distribute heated or cooled air throughout a building.*

*Ventilation Fans: Enhance air circulation and remove stale air from indoor spaces.*

*Air Handlers: Circulate and condition air, often a component of central heating and cooling systems.*

*Humidifier: Adds moisture to the air, especially in dry climates or during winter.*

*Dehumidifier: Removes excess moisture from the air, improving comfort and indoor air quality.*

*Condensing Unit: Part of an air conditioning system that releases or collects heat.*

*Evaporator Coil: Absorbs heat from the indoor air in the cooling process.*

*Compressor: Increases the pressure of refrigerant in the cooling cycle.*

*Expansion Valve: Regulates the flow of refrigerant in the cooling process.*

*Heat Exchanger: Transfers heat between two fluids, often in furnaces and boilers.*

*Fan Coil Unit (FCU): Part of an HVAC system containing a fan and heating/cooling coil.*

*Vents and Grilles: Openings that allow air to enter or exit a space.*

*Air Filters: Capture dust, pollen, and other particles to improve indoor air quality.*

*Thermal Insulation: Material that reduces heat transfer, improving energy efficiency.*

*Thermal Expansion Valve (TXV): Regulates refrigerant flow in some AC systems.*

*Registers: Grilles equipped with dampers to control air distribution.*

*Heat Recovery Ventilator (HRV) / Energy Recovery Ventilator (ERV): Improve ventilation and energy efficiency.*

*Programmable Thermostat: Allows users to set temperature schedules for energy efficiency.*
