Keyboards *designed to fit hands*

Maltron Keyboard – Ultimate in Ergonomics?

by AI—The Coolest Gadgets

This Maltron keyboard has got to be the strangest keyboard I've ever seen.

With a conventional keyboard you generally use only 8 fingers meaning you're wasting 20% of your pinkies. With the Maltron you get to use all 10 fingers meaning you can theoretically type faster. One of the other big bonuses of the Maltron keyboard is how it helps to prevent RSI, quoting the sales spiel:

The heart of the Maltron keyboard is the switch. The Cherry MX switches are considered the best keyboard switches in the industry. Cherry switches are known to last 50 million key strokes per key! Many keyboard intensive users report that their keyboards last over 10 years despite heavy usage of the Maltron keyboard. The Cherry MX key switch is specifically designed to reduce the pressure to the users fingers and hands.

One of the major causes of RSI (Repetitive Stress Injury) is the need to pound the key of membrane key switches to make it activate. This constant pounding takes it toll on the human body over the years. Cherry MX key switches activate HALF WAY thru the key stroke. This means that the user does not have to pound the keys into the base of the keyboard. This significantly reduced the stress to the human body. Use a Maltron keyboard for a day, and you will be amazed the results!

The new Maltron Flat "Finger Length Adapted", or finger friendly keyboard responds to this view, and incorporates some key features (no pun intended!) of the existing design but in a more conventional shape. Two key groups for letters with a central number group, as before, keep wrists straight and strain free. Central numbers suit both left & right handers. The letter keys are angled inwards to match natural finger movements and, as in the 3D two-handed design, the keys for the longer fingers are further away to reduce finger motion and provide small therapeutic actions.

Beautiful aluminum design & colors.

Taking design cues from Apple's iconic aluminum keyboards, the Matias Wireless Aluminum Keyboard fills a few gaps that Apple chose not to pursue...

For starters, we offer it in 4 gorgeous colors — Silver, Gold, Space Gray, and Rose Gold. Owners of the ultralight, ultrathin, Apple MacBook can now have a Bluetooth wireless keyboard that matches its look and color, and feels great to type on.

The world's quietest mechanical keyboard.

All of the enhanced tactile feedback, greater comfort and faster typing speeds of the Tactile Pro... but QUIET. Computer users who crave the *feel* of Apple and IBM's high-quality "clicky" keyboards of years past, but don't miss their noise, will love the all-new Quiet Pro. **For PC & Mac.**

Secure wireless. (128-bit AES encryption)

The Secure Pro connects wirelessly to your computer via an AES encrypted USB nano receiver — the strongest level of encryption available in a keyboard. Even with a supercomputer, it's been estimated to take a billion-billion years to crack.

Bespoke Projects

As you can see, it is a "squashed" version of our two-hand fully ergonomic keyboard with a front extension for a mouse pad. This follows on from the development of our previous bespoke keyboard (code-named "TJ"), but this "KW" has four more keys and a proprietary miniature programmable PCB called the Teensy. The "Teensy" USB controller is just that - small (just 18mm x 50mm) with a mini USB controller and a small reset button

Difficulties with the Standard Keyboard

Computer use is now an integral aspect of the vast majority of jobs in all fields. People working in a diverse range of jobs from secretarial to aeronautics are likely to spend long periods of time typing on computer keyboards. In addition, computer proficiency is a requirement of all learning environments, from primary school onwards.

The standard QWERTY keyboard tends to be difficult to use with one hand, and research shows that it may lead to further injury of the affected or other hand as a result of flexion, extension and deviations in joints and muscle strain from holding hands and fingers in unnatural positions. Hand injuries account for 33% of all injuries at work, 33% of chronic injuries, 25% of lost working time and 20% of permanent disability.

Alternative Number Entry Option

The unique switchable dual layout feature of Maltron keyboards has now been developed for single handed keyboards to give an alternative number entry option. For intensive number work the flat number panel alongside the letters is not ergonomic and can lead to fatigue as there is nowhere to rest the hand during pauses. To overcome this problem the number pad numbers are now also grouped on the letters keys. Either letters or numbers may be immediately selected by pressing a separate button. Windows keys are also included.

Key features of Maltron Single-Handed Keyboards

The shape and letter layout of the keyboard have been planned to take into account the number of keys that can be accessed quickly and comfortably

- The keys have a push-on, push-off option for Shift, Control and Alt functions
- The most commonly used letters are the easiest to reach to reduce awkward finger movements
- The switchable dual layout feature has been developed to give an alternative number entry option
- Screen and paper-based self-paced training manuals facilitate quick, easy learning and touch typing
- Typing speeds of 85 words per minute have been demonstrated by operators using Maltron single-handed keyboards.

Fast Word-Processing

Word processing speeds of 85 words per minute can be achieved using the Maltron single handed keyboards. The fully ergonomic shape ensures freedom from strain and no RSI type problems have been reported in over 10 years despite the fact that all work is done by one hand!

MALTRON MOUTH / HEAD STICK KEYBOARD

Often described as a head keyboard, mouth keyboard or single-finger keyboard, the shape matches natural head movement and the key arrangement minimises finger or stick activity, raising speed and relieving frustration. Push-On, Push-Off keys are provided for Shift, Control and Alt.

The single finger, head or mouth stick keyboard can be used for conditions that exclude typing with the hands. It can be used on a table as shown, or attached to an articulated monitor arm adjusted to suit the user. It is also fully ergonomic in that the rectangular front is concave to match stick end movement. The letter layout, equally ergonomic, is arranged to have the most used letters grouped in the centre to give minimum movement.
