2025 PRODUCT CATALOG

Interior Design Collection

A Studio of Fabric Images®

Bringing Life to Your Vision.

In the world of interior design, light and sound play a critical role in how people experience a space.

Our line of acoustic décor products combines form and function, delivering visually inspiring, sound-absorbing solutions that help create comfortable, purposeful spaces. Each category offers a unique approach to sound absorption, ensuring an effective treatment based on the unique layout and needs of each space.

Equally experiential, illuminated art delivers a new level of visual impact and spatial versatility for interiors. Our highly adaptable, perimeter lit framing system pairs with high resolution, printed fabric artwork to create focal points that drive the visual and spatial aesthetic of the space.

For over 30 years, we’ve collaborated with designers to create innovative solutions for interiors, live events, and retail environments. We thrive on innovation, collaboration, creativity, and the pleasure that comes from bringing life to our customer’s vision.

Fi™ Interiors is a Studio of Fabric Images®.

Simply Elegant
Solutions for Sound Enhancement

QUIET SPACE. QUIET MIND.

This functional material dampens sound and controls unwanted noise in open spaces, greatly reducing sound reverberation in the mid-to-high frequency range.

CUSTOMIZATION

The material attributes of Acusti-fi™ offer endless creative possibilities for interior spaces.

Speci·fi™

Choose the colors that work best for your space. Acusti-fi is available in 20 standard colors, eight wood textures and five stone textures. If you don't see a color that works for you, let's talk about printing. We can print customized patterns and artwork unique to your specified design and style.

9mm Acoustic Felt

Wood Textures

Stone Textures

Modi·fi™

From material to masterpiece. Choose the finishing details that define your space. Acusti-fi™ accepts the following:

CUT

Create a composition that defines the personality of your space. Acusti-fi beautifully accepts precision cut patterns and shapes. Choose from pre-designed options or work with us to design and create your own.

V-CARVE™

V-Carve is a texturizing technique that creates depth. Lines are sculpted away from the surface of the Acusti-fi material, offering beautiful tonal patterns. Choose a standard pattern or collaborate with us to create your own.

PRINT

Fi™ Interiors print capabilities are second to none. We use state-of-the-art print technology to digitally print onto the Acusti-fi material, which offers vibrant output, excellent resolution, all without compromising the sound absorption qualities of the material.

POWDER COAT

Where metal details accentuate the design, a powder coated finish adds elegance to the solution. A selection of colors is available. Talk to us about the options.

Tailored, Unique Solutions

All products available in the Fi™ Interiors acoustic product line can be customized to meet the needs of a space. Through collaboration we can creatively execute changes in form, shape and size, or develop custom patterns, textures and prints. When it comes to design, we are limited only by your imagination.

Fi Interiors is built on the foundation of custom interior solution design and manufacturing. Our team encompasses graphic and industrial designers, engineers, project managers, experience specialists and highly skilled craftsmen. This cohesive team offers original creative solution development to our clients, from ground-level conception to finished, market-ready solutions.

Our custom capabilities combined with our collaborative spirit promises truly authentic and original design solutions for interiors of all types.

Undulating acoustic beams with integrated LED strip lighting.

Custom acoustic ceiling and Blaze™ lightbox desk in reception area.

Blaze illuminated walls and acoustic ceiling for NeoCon trade show.

Acoustic beam configuration with metal bracket details.

176' illuminated wall in underground corporate training center.

Wood grain printed acoustic baffle in recessed ceiling.

CEILINGS

LOOKING UP TO SOUND

Baffles

Parallel lines offer a natural setting with the Baffles acoustic ceiling line. The classy vertical panel design paired with the Acusti-fi™ material gently guides the eye and settles the ear.

BEAM

The Beam ceiling system plays with sophistication and elegance. Combining recognizable form with aesthetics and function, the opportunities are endless and lightweight.

HATCH™

The Hatch™ acoustic ceiling is where form and function intersect. The cellular design captures excess sound bouncing from every direction, significantly improving acoustic performance across the entire frequency range.

EXPANDED COMPOSITIONS

ACOUSTICALLY SOUND ASSEMBLIES FOR LARGE SPACES

The Baffle line of products are designed to act as beautiful stand-alone features, but when joined they create a stunning composition. The concealed assembly between units provides harmonious flow while the additional coverage offers maximum acoustic impact for large spaces.

Choose the baffle design that speaks to your space.

To expand the footprint the baffle system spans, join multiple units. Play with mirroring the orientation to create large patterns.

The baffle systems lock together with a dovetail connection, providing a seamless appearance. Talk to us about joining systems to ensure a dovetail finish.

BAFFLE

Subtle natural lines inspired the personalities of the Baffle ceiling line. Each unique assembly is designed to absorb sound and reduce reverberation while presenting a gentle rhythm and movement.

Consider how you can customize Baffles to address the needs of a space. Play creatively with form, shape, size and metal detailing.

Level™
ACU-BAF-LVL

Level presents straight, level lines. The uniform repetition creates order and defines spatial boundaries.

BEAM

Beams adorn a ceiling with intention. The dimensional attributes of the design, combined with the properties of Acusti-fi™ acoustic felt, increase acoustic performance when arranged within a space.

Introducing high-resolution digitally printed graphics can completely transform any space. Digitally printed wood grain offers the realism of natural wood products with the added benefit of sound absorption.

EXPANDED COMPOSITIONS

ACOUSTICALLY SOUND ASSEMBLIES FOR LARGE SPACES

Exposure Acoustic Beam Clusters bring balance to the look and feel of interior environments. Depending on the needs of the space, single units can be configured to cover larger areas, with each design offering a unique visual composition.

BEAM CLUSTERS

Exposure™ Acoustic Ceiling Beam Clusters offer an architectural, customizable solution for managing the sound and spatial design of interior spaces. Each cluster includes 7 hollow beams for maximum sound absorption, held in place by rigid, aluminum tubing that accommodates minimal mounting points. Each unit is lightweight, easy to assemble and install, and can be multiplied to cover larger areas.

SPATIAL COMPOSITION

ACOUSTICALLY REFRESHING AND VISUALLY INTERESTING

The Hatch™ line of products offers flexibility to design to the scale of a space. The shapes can be effortlessly configured to cover large spans of open ceiling, providing maximum acoustic absorption.

Option 1

Create depth by layering shapes within the space.

Hatch™ Round

side view

Option 2

Join straight canopies together through a seamless locked connection along the vertical edges to create an endless expanse.

Hatch™ Rectangle

The Hatch system locks together with a dovetail connection, providing a seamless appearance. Talk to us about joining systems to ensure a dovetail finish.

HATCH™

The Hatch™ acoustic ceiling line of products captures the essence of space with visual complexity and acoustic performance. Use individually in small spaces or create an assembly of shapes for large open areas.

The Hatch system is easily customizable and can be designed as a site-specific and visually striking solution. The flexible attributes of Hatch offer endless creative possibilities.

Hatch™ Round

ACU-HTC-RND

Hatch™ Round is a modern example of symmetry. Taking the shape of a circle, the functional design inspires a unified sound experience.

Walls

Acoustic wall treatments offer a decorative approach to integrating acoustic solutions in a space. With the ability to accept high-output digital printing, our acoustic wall solutions offer the opportunity to personalize the graphic imagery to the space or brand.

BOX

The Acusti Art™ Box is a dimensional wall art element that combines printed digital graphics with the sound absorption properties of Acusti-fi™. The frameless finish emulates the nature of a stretched canvas, while the slight depth offering an air gap increases the sound absorption performance.

Box

The Acusti Art™ Box is digitally printed acoustic art. The printed graphics are high-quality productions that easily dress any space with photo-realistic imagery and messaging.

HANGING

Offering beautiful separation of space, Hanging Partitions are designed to section off open areas, creating privacy, defining space, and creating visual interest, all while improving acoustics.

STANDING

Standing Partitions provide an adaptable acoustic barrier. They can be effortlessly positioned to create a flexible space for acoustic optimization in the space, privacy and collaboration.

DESK

Desk Partitions merge simplicity and purpose. Offering a personal shield, these partitions absorb sound, offer a surface that is tackable and create a sense of privacy.

DEFINE™ HANGING PARTITIONS

The Define Hanging Partitions do just that; they add definition to a space built on simple elegance and function.

DESK PARTITIONS

Making personal space a priority, Desk Partitions offer privacy where it's needed—at our workspace. The simplistic nature of the enclosure impacts focus by offering visual separation and addressing noise levels.

Personal space should look great! Add personality to Desk Partitions by designing graphics that can be digitally printed on the outside and inside surfaces.

FLOAT™

Float™ is a freestanding desk partition that requires no anchoring. The miter-fold design enables Float to firmly stand upright and offers reversibility. Made using two layers of Acusti-fi™ acoustic felt, Float offers the opportunity to incorporate two colors. This means what is the inside surface one day can be the outside surface the next.

V-CARVE™ PATTERNS

Introducing V-Carve™ to the surface of the Acusti-fi™ material creates a composition of depth. This technique presents a single-tone solution that adds contrast and luxury to partitions and walls.

Talk to us about creating custom V-Carve™ patterns for your space.

V-Carve can be achieved on one face of the 9mm Acusti-fi™ material. If a double-sided V-Carve panel is required, two sheets will be needed.

CUT PATTERNS

Open sight lines while you style your space by adding cut patterns to the Acusti-fi™ material. This line of patterns includes a host of personalities with opportunities to create beautiful compositions.

Acusti·fi™

Acusti·fi™ is a sound-absorbing rigid felt material designed to quiet a space in style. The sound-absorbing material is available in a range of standard colors, can be custom printed, and beautifully accepts cutting to showcase designs, patterns and shapes.

9mm Acoustic Felt

Quiet space. Quiet mind.

ILLUMINATED ART

Illuminate and Captivate

The presence of illuminated art in interior spaces enhances the ambiance with added light, brilliant color, and inspiring visuals. Blaze™ combines large format, digitally printed fabric with a sophisticated, perimeter lit framing system to deliver an innovative alternative to vinyl and painted murals, or traditional artwork.

WALL MOUNTED

Create focal points on interior walls with glowing artwork.

FREESTANDING

Create spatial division and independent artistic experiences.

PERSONALIZE ARTWORK TO CREATE CONNECTION

Blaze provides a blank canvas and total freedom of expression. Select or develop artwork that speaks to the space, brand, or experience. Enhance that artwork with an ambient glow.

We utilize state-of-the-art equipment to print any size artwork with vibrant colors and excellent resolution. Artwork printing and finishing are core capabilities; we ensure the best color, quality and fit.

MEET THE NEEDS OF AN EVOLVING SPACE

Blaze combines durable fabric with a silicone edge finish that allows easy installation and replacement of artwork in just a few minutes. For an ever-evolving space, art can be changed regularly with little effort.

Acusti·fi™

Material Specifications

Description

An elegant rigid felt with matte finish designed to absorb acoustic noise. Tackable, impact resistant, bacteria resistant, moisture resistant, installation friendly.

Application

Offers acoustical clarity when introduced within an environment in applications for walls, ceilings, partitions and other design solutions.

Size / Weight

3/8" (9mm) x 4ft x 8ft (+/-) sheet
8.5 lbs / sheet (3.85 kg)

Material Content

100% Polyester, min. 50% post-consumer recycled content, Formaldehyde free, NO-VOC

Acoustic Range

ASTM C 423 - SA = 0.30 to 0.98
ASTM E 1264 - NRC = 0.30 to 1.0

Flammability

ASTM E-84 Class A

Maintenance

For routine maintenance lightly dust with a soft brush or vacuum.

For light marks or stains:

**Avoid excessive amounts of water.

- Gently clean excess with sponge or cloth.
- Sponge with a small amount of carpet shampoo working circularly from well outside the stain towards the center.
- Sponge afterward with warm damp cloth and mop excess water with a clean dry cloth or sponge.
- Allow to dry.
- Brush gently with a soft brush.
- Repeat as necessary.

DIGITAL PRINTING

Artwork and graphics tell a story. Digitally printing graphics on the surface of Acusti·fi™ enables graphics to be heard, in a quieting sense. Design your own graphics or choose from our library of options. Either way, it is your story to tell.

At Fi™ Interiors we adopted the latest, cutting-edge print technology to provide consistent output across a wide variety of substrates. In addition to color consistency and efficiency offered by our print technology, the process has an additional white color channel allowing for artwork to stand apart from traditional CMYK outputs.

As a brand of Orbus® Visual Communications Group, Fi Interiors is a G7 Master IDEAlliance certified printer. Our graphics department produces high-quality, consistent and accurate color graphics on state-of-the-art equipment.

- 8 color process CMYK
- Higher resolution quality
- Water-based ink
- Continuous color tones
- Increased color gamut of Pantone colors
- Smooth transition of blended colors
- 5th color overprint - White
- Consistency in colors across media

POWDER COATING

Where metal details dress the design, the finish is a fundamental accessory. Powder coating is a finishing method that adds beauty and class to metal, allowing the metal to be one with the design.

At Fi Interiors we believe in limiting environmental impact, which is one of the many reasons we have chosen powder coating over conventional paint applications. This process allows us to minimize the release of volatile organic compounds (VOCs), thus making powder coating an eco-sensitive alternative.

The powder used in this process is a mixture of finely ground particles of pigment and resin, which is sprayed onto a surface to be coated. The charged powder particles adhere to the electrically grounded surfaces until heated and fused into a smooth coating in a curing oven. The result is a uniform, durable, high-quality, and attractive finish.

Does your space have the mood for something different? Talk to us about the powder coating color options. There are too many to count!
