Overview

<p>At a high level, ZeroEyes is a gun detection system utilizing AI technology. Simply put, we turn your NEW or EXSISTING camera system from being a reactive solution into a proactive lifesaving system. We notify the district, law enforcement, and individual school at First sight of a weapon instead of First shot of a weapon. ZeroEyes is the only weapons detection technology company today providing the fully integrated bundle of technology, methodology, and client services listed below to K12 Institutions. The ZeroEyes solution is only available through ZeroEyes, Inc., and includes all of the following bundled features and capabilities: • AI (artificial intelligence) – ZeroEyes utilizes AI technology to detect and identify guns (handguns, rifles, shotguns, military-style assault weapons) on K12 campuses • Existing Institution Camera Infrastructure – ZeroEyes monitors feeds from the existing camera infrastructure on school campuses and inside school buildings • Proprietary Technology and Methodology - ZeroEyes developed proprietary methodology and algorithms that train its AI software to accurately detect weapons. These include: o training its AI software in real-world scenarios, (onsite, real weapons, green-screen scenarios that train on specific client locations and sites, low-light, black-on-black, and various weather scenarios conditions o creating, maintaining, and continuously updating its proprietary data set to identify new weapons and scenarios (ZeroEyes does not use synthetic data) o maintaining and updating its propriety algorithms to accurately identify the most common weapons used in active shooter scenarios • Active, Staffed, 24-7-365 Monitoring - ZeroEyes operates its own monitoring centers in support of its clients. These centers are staffed by highly trained former military veterans who monitor, in real-time, every system-generated alert before the alert is dispatched to the client. This added layer of security and support: o eliminates the potential for false-positive weapon detections being dispatched to the client o assures genuine and vetted detections are dispatched to the client in under ten (10) seconds from the initial AI detection o provides a human backup to assure the client is aware of all dispatched alerts • Open Architecture - ZeroEyes provides an open-architecture platform to enable integration with other client-owned safety and security systems in use in their district, including: o access controls systems o video management systems o mass notification systems o crisis communication applications CAD and mapping software platforms</p>
