Overview

Epson's inkjet innovation is a core pillar of growth for us through 2025. And at the center of it all is our PrecisionCore technology. It's revolutionary: a modern, heat-free printing technology that's a clean, simple, smart alternative to existing technologies like laser.

It's unique in the world for many reasons — unique in the way we manufacture, in the performance, in the incredible quality of the output, and in the cost.

We think it's the most advanced printing technology out there, period. And it's going to completely disrupt the office printing market.

Epson PrecisionCore Represents a Modern Heat-Free Printing Technology of the Future, Delivering a Clean, Simple and Smart Alternative to Existing Printing Technologies.

- Lower total printing cost: it's cheaper to manufacture the machine and the consumables than with laser technology,
- It's easy to service — no drum, no fuser, less rollers. It's just an easier device to service and maintain.
- Low energy consumption: We're turning out 100 pages per minute with a machine that's plugged into the wall. It's a 110-volt machine. Most printers that can turn out 100 pages per minute require a 220-volt line, and that alone is an investment of up to \$5,000. Ours you just plug into a standard wall outlet.
- And last, broad media flexibility. For instance, if you're in the wide-format or proofing space, you know that inkjet has been the standard there, offering all kinds of media flexibility.
